

# Application for definition of the terms of connection to the transmission grid

The connection to the transmission grid takes place pursuant to a connection agreement, after the entity that requests such connection meets certain requirements set forth in the terms of connection issued by TSO.

The following steps can be discerned in the connection process:

- submission of the application for definition of the terms of connection by the entity requesting the connection,
- definition of the terms of connection by TSO,
- execution of the connection agreement,
- implementation of the connection agreement.

TSO will define the terms of connection or inform that there is no possibility of connection within the time limit not exceeding:

- 60 days for entities engaged in transmission, distribution or storage of gas fuel, owners of liquefied natural gas installations or entities engaged in production from fields,
- 45 days for other entities,

of the date of submission of a complete application that conforms with the formal requirements.

The terms of connection are valid for one (1) year of the issuance date, and can be extended upon request of the entity seeking the connection.

The request for extension of the validity of the terms of connection should be submitted to TSO at least sixty (60) days prior to the expiry of the previously issued terms.

The transmission network connection agreement is concluded upon request of the entity that has valid terms of connection to the transmission grid.
