

Additional services

Transmission System Operator can provide additional services such as:

- **gas odourisation** – before the gas fuel is introduced to the distribution network it has to be saturated with an intensely odorous substance, most commonly THT (tetrahydrothiophene),
- **performance of additional measurements**, other than the mandatory measurements performed by TSO in connection with the transmission service,
- **operation, maintenance, repairs and investments within the customer's network and installations,**
- **interruption, reduction and restoration of gas supply to selected system points** – upon request of the Customer .

For further information on additional services please contact the appropriate regional [Branch](#).
