

Transmission - key figures

Data for 2018 – as at 31 December 2018

Total length of transmission network	10 743 km
Number of entry points ¹	67
Number of exit points ²	934
Number of gas stations	848
Number of compressor stations	15
Number of transmission system nodes	34
Volume of transmitted gas fuel ³	17,2 bcm
	193,7 TWh
Volume of transmitted gas fuel including underground gas storage (UGS) ⁴	19,4 bcm
	218,7 TWh
Underground gas storage working volume (UGS)	3 bcm

¹ - The number of physical entry points to the transmission system i.e. places of the gaseous fuel delivery with specified physical location. This number includes gas import, gas off-take from the underground gas storage, gas delivery from producing fields and production (mixing facilities).

² - The number of physical exit points from the transmission system i.e. places of the gaseous fuel off-take with specified physical location. This number includes transmission to exit points at the point of interconnection with a distribution area and distribution network not being gas distribution area, delivery to the underground gas storage, export and final customers.

³ - The provided amount of gas transmitted includes transmission of low-methane natural gas (L) converted into high-methane natural gas (E). The amount of transmitted gas in volume units (m³) is just approximated value.

⁴ - The provided amount of gas transmitted includes transmission to underground gas storage, transmission of low-methane natural gas (L) converted into high-methane natural gas (E). The amount of transmitted gas in volume units (m³) is just approximated value.
