

11.01.2018

Over 5 million cubic meters of LNG have been delivered to the Polish LNG terminal

Counting from the first delivery to the President Lech Kaczyński LNG terminal in Świnoujście in December 2015, facility has received more than 5 million cubic meters of LNG.

The discharge of another LNG carrier, that arrived at the terminal on 8th of January 2018 has been completed. The vessel, LNG carrier of Q-Flex type, brought over 200 thousand cubic meters of LNG. By far, such tankers have appeared at the shores of Świnoujście once a month, on average. In 2018 the frequency of discharges is going to be doubled. Simultaneously, the LNG terminal is under an expansion project. This venture is a part of a complex development strategy implemented by GAZ-SYSTEM Capital Group.

Following a development of an existing system of SCV's, providing the change of the natural gas state from liquid into gas, with subsequent units, the regasification capacity of the terminal will be increased from current 5 bcm up to 7.5 bcm of natural gas on a yearly basis. Such quantity allows to fulfill almost a half of Poland's demand for this energy resource.

Furthermore, the extension project consists of construction of another quay, which will provide other services, i.e. loading and unloading of small and medium carriers, LNG transshipment (from the vessel moored at the existing jetty), LNG loading into bunkering vessels and direct bunkering.

The Management Board of GAZ-SYSTEM put forward as well a recommendation to its subsidiary Polskie LNG concerning the commencement of design and preparatory works, ensuring reloading of LNG into ISO cryogenic containers and railroad tank cars. The planned investment includes construction of a railway siding along with the LNG reloading infrastructure, to be placed within the premises of the terminal.

It is envisaged that Świnoujście LNG terminal expansion project will be co-funded from the EU funds.

GAZ-SYSTEM plays a strategic role in the Polish economy. We are responsible for natural gas transmission and operate the most important gas pipelines in Poland. As part of the 2015-2025 investment programme, GAZ-SYSTEM plans to build over 2000 km of new gas pipelines in western, southern and eastern parts of Poland. Further development of the national transmission network, including the construction of new gas pipelines making part of the North-South Gas Corridor, as well as the construction of interconnections with the neighbouring countries, will strengthen Poland's energy security and make an important contribution to the development of the European transmission system.

The Company is implementing one of the most important infrastructural projects in Poland – the Baltic Pipe project, which consists in the construction of a bidirectional offshore gas pipeline connecting Poland and Denmark and the expansion of the local transmission network.

GAZ-SYSTEM also owns Polskie LNG, the operator of the President Lech Kaczyński's LNG Terminal in Świnoujście.
