

Cross-border points

From 16 August to 7 September 2012, GAZ-SYSTEM S.A. held a market screening procedure in respect of capacity upgrade for selected interconnection points.

The procedure was aimed at assessing the market demand for increased capacity at the following points:

- **Transit Gas Pipeline System Mallnow reverse flow** (ID 87002) - expectations of the market regarding the availability of gas transmission from the direction of Germany (physical reverse transmission service). The reverse transmission service is currently provided on an interruptible basis, at 4th level of gas supply reliability according to point 9.2 of the TGPS Tariff. The technical reverse-flow capacity at the Mallnow point corresponds to the aggregate technical capacity of the exit points to the Polish system.
- **Tietierowka** (ID 572405), physical flow in BY-PL direction through the Tietierowka entry point (ID 572405) to the Grabówka exit point (ID 588010).
- **Lasów reverse flow** (ID 202411) - expectations of the market regarding the availability of gas transmission from the direction of Germany (physical reverse transmission service). The reverse-flow service is currently provided at 4th level of supply reliability according to the currently applicable Tariff for Gas Transmission Services of GAZ-SYSTEM S.A.

The results of the procedure are being analysed by GAZ-SYSTEM S.A. and will lead to subsequent corporate decisions.
