

# Gas compressor station in Jarosław

## Description of the investment

September 23, 2011 the opening ceremony of the modernized gas compressor station in Jaroslaw took place. The new infrastructure replaced the previously compressor station. The nominal capacity of the new element amounts up to 300,000 cubic meters per hour.

## Benefits

The Jarosław II gas compressor station is one of the largest structures in the Polish transmission system. The compressor station is designed to compress imported gas transmitted from the territory of Ukraine via the Drozdowicze - Hermanowice hub and from domestic deposits located in the Jarosław - Przemy 1 region.

The Jarosław gas compressor complex is located within the City of Jarosław, in the podkarpackie voivodship.
