

09.12.2014

GAZ-SYSTEM S.A. and Net4Gas will offer increased capacity in the Cieszyn point in January 2015

As a result of an agreement entered into between operators of the Polish and Czech gas transmission system, in January 2015 the transmission capacity at the Cieszyn point (ID 370001) will be increased by 87 083 kWh/h. The additional capacity will be offered under the auction for a monthly product on 15 December 2014 (monthly product for January 2015).

The total capacity that will be made available on 15 December, 2014 will be 87 323 kWh/h, including: 87 083 kWh/h (additional quantities) and 240 kWh/h (capacity remaining from quarterly auctions in January – March 2015).

Detailed information on the auction is available in the [GAZ-SYSTEM Auctions](#) platform.

GAZ-SYSTEM is a strategic company for the Polish economy. It is responsible for the transmission of natural gas, manages the most important gas pipelines in Poland and owns the President Lech Kaczyński LNG Terminal in Świnoujście.

As part of the 2015-2025 investment programme, GAZ-SYSTEM is constructing over 2000 km of new gas pipelines in the western, southern and eastern parts of Poland. Over a dozen new gas pipelines are under construction within the North-South Gas Corridor and the compressor station in Kędzierzyn Koźle, as well as interconnections with Lithuania and Slovakia. Onshore gas pipelines are planned to connect the planned FSRU floating terminal in the Gulf of Gdansk with the national transmission system. The LNG Terminal in Świnoujście is also being extended, as a result of which the regasification capacity of this facility will be increased by more than a half.

The company is also implementing one of the most important infrastructural projects in the country - the Baltic Pipe project which consists in the construction of a two-way offshore gas pipeline connecting Poland and Denmark, expansion of the local transmission network and three gas compressor stations.
