

Workshops on the project Guidelines on Transmission Network Code

Presently, GAZ-SYSTEM is carrying out market consultations on suggested amendments to the Guidelines on Transmission Network Code (TNC), enabling gas market participants to join workshops, organized on March 22.

The meeting covered debates on changes in new provisions introduced to the Guidelines as well as the discussion on operations of the national transmission system and rules of cooperation to be applied to operator-network users relations, that are to be modified.

Nearly 130 attendants of the gas market accepted an invitation, including Clients of GAZ-SYSTEM, representatives of the Ministry of Energy, Energy Regulatory Office, Office of Technical Inspection as well as the employees of GAZ-SYSTEM.

The workshops agenda encompassed the following issues:

- procedures of releasing and settling stocks of natural gas, including settlements concerning releasing stocks stored in warehouses, located within the territory of Poland and abroad;
- new solutions in the area of capacity booking, including capacity forecasts;
- intraday duties, changes relating to termination of the transition period for the balancing code as well as balancing operations within high nitrogen gas;
- changes in the meteorological control over gas meters

We encourage you to go through presentations we discussed over the course of workshops:

- [A procedure of releasing and settling stocks of natural gas](#)
- [Capacity forecasts](#)
- [Intraday duties relating to termination of the transition period for the balancing code](#)
- [Changes in the meteorological control over gas meters](#)

In addition, we remind you that you may submit comments on amendments to the Guidelines on Transmission Network Code as well as Methods and assumptions of the compliance analysis regarding an introduction of the intraday duty as of Art. 26, item 2 of NC BAL.

Documents subject to consultations and application forms for comments are available [here](#).

GAZ-SYSTEM is a strategic company for the Polish economy. It is responsible for the transmission of natural gas, manages the most important gas pipelines in Poland and owns the President Lech Kaczyński LNG Terminal in Świnoujście.

As part of the 2015-2025 investment programme, GAZ-SYSTEM is constructing over 2000 km of new gas pipelines in the western, southern and eastern parts of Poland. Over a dozen new gas pipelines are under construction within the North-South Gas Corridor and the compressor station in Kądzierzyn Kołble, as well as interconnections with Lithuania and Slovakia. Onshore gas pipelines are planned to connect the planned FSRU floating terminal in the Gulf of Gdansk with the national transmission system. The LNG Terminal in Świnoujście is also being extended, as a result of which the regasification capacity of this facility will be increased by more than a half.

The company is also implementing one of the most important infrastructural projects in the country - the Baltic Pipe project which consists in the construction of a two-way offshore gas pipeline connecting Poland and Denmark, expansion of the local transmission network and three gas compressor stations.
