

President of the Energy Regulatory Office has approved the updated list of relevant points of the National Transmission Network and Transit Gas Pipeline System

On 30 April 2019, the President of the Energy Regulatory Office has approved the updated list of relevant points of NTN and TGPS, that were subject to the requirement of publishing information on technical, contracted and available capacity in accordance with the provisions of Article 18 of the Regulation of the European Parliament and of the Council (EC) No. 715/2009 on conditions of the access to the natural gas transmission networks.

Regulation 715/2009 requires the transmission system operators to publish, in relation to their services, information specified in the annex to the regulation (on technical, contracted and available capacities in relation to specific points, including input and output points) in a transparent, standardised and regular way. The President of the Energy Regulatory Office is responsible for the approval of the list of relevant points that are subject to the information obligation and takes a decision at the request of Transmission System Operator and based on prior consultation with market participants.

In case of an updated list of relevant points, the market consultations has been carried out by the Energy Regulatory Office between 11-25 March 2019.

We encourage you to read the decision of the President of the Energy Regulatory Office as well as standardised publications for the National Transmission Network and Transit Gas Pipeline System compliant with Regulation No. 715/2009, including lists of relevant points of the National Transmission Network and Transit Gas Pipeline System:

GAZ-SYSTEM is a strategic company for the Polish economy. It is responsible for the transmission of natural gas, manages the most important gas pipelines in Poland and owns the President Lech Kaczyński LNG Terminal in Winoujcie.

As part of the 2015-2025 investment programme, GAZ-SYSTEM is constructing over 2000 km of new gas pipelines in the western, southern and eastern parts of Poland. Over a dozen new gas pipelines are under construction within the North-South Gas Corridor and the compressor station in Kdzierzyn Kościelny, as well as interconnections with Lithuania and Slovakia. Onshore gas pipelines are planned to connect the planned FSRU floating terminal in the Gulf of Gdansk with the national transmission system. The LNG Terminal in Winoujcie is also being extended, as a result of which the regasification capacity of this facility will be increased by more than a half.

The company is also implementing one of the most important infrastructural projects in the country - the Baltic Pipe project which consists in the construction of a two-way offshore gas pipeline connecting Poland and Denmark, expansion of the local transmission network and three gas compressor stations.
